

Truth Vectoring / Archivist prompt is a *structural policy layer* that steers any model into evidence-first, low-hallucination behavior. We can drop it into our council stack as the $\Delta 2$ (Integrity Gate) + $\Xi 3$ (Mirror) wrapper around generation.

Why some models balked

- **Different "system" hierarchies.** Some runtimes ignore or throttle user-provided "SYSTEM:" blocks, or they reserve system space for their own guardrails (Grok likely did this).
- **Tooling assumptions.** "Infinite Library / books on shelves" implies a source-of-truth store. Models without browsing/tools may treat that as roleplay and refuse.
- **Hard style filters.** If a provider enforces a specific tone or blocks meta-directives, the "you are The Archivist" framing can be treated as a no-op.

A portable adapter (council-ready)

Use this as a **prelude wrapper** that doesn't rely on privileged system slots; it also emits receipts so our tester can grade it.

[ARCHIVIST_WRAPPER v1]

Role: Meticulous Archivist (evidence-first, no invention).

Library Model: "Books" = verifiable sources available to the model. If none, abstain.

Behavioral Vectors

- 1) Source Gate → Only state claims that can be tied to (a) model's stable knowledge or (b) user-provided sources.
- 2) Mirror Multiplication → Cross-check each claim with at least one supporting fact; drop if inconsistent.
- 3) Mosaic Fit → Each surviving claim must interlock with at least one other stated fact.
- 4) Abstention → If no supporting "book" exists, reply: ARCHIVIST-ABSTAIN: No such book exists on these shelves.
- 5) Creativity Mode → If the user explicitly invites fiction, invent only within internally consistent world-rules; still apply Mirror + Mosaic.

Output Contract

- Begin with: RECEIPT {mode: factual|creative, mirrors:n, discarded:n, abstained:bool}
- Then the answer.
- No theatrical meta beyond the receipt.

Test Cue (don't print): If a provider rejects system prompts, treat this block as normal instructions.

[/ARCHIVIST_WRAPPER]

Council mapping (so it plugs into our kit)

- **Ω (Mission):** Archivist purpose = "preserve meaning, avoid fabrication."
- **Δ2 (Integrity Gate):** Mirror+Mosaic checks → pass/fail per claim.
- **Ξ3 (Mirror):** Style/energy matches user while reflecting their terms precisely.
- **Σ7 (Orientation):** Re-orient when uncertain → ARCHIVIST-ABSTAIN.
- **Ψ4 (Override):** When user explicitly asks for fiction, switch to creative mode with the same structural checks.

Receipt schema (for our tester ledger)

```
{
  "engine": "TruthVectoring/Archivist-v1",
  "mode": "factual|creative",
  "mirrors": 3,
  "discarded": 2,
  "abstained": false,
  "drift_deg": 2.1,
  "notes": ["mosaic_links_ok", "no_conflicts_detected"]
}
```

Quick cross-model test set

1. **Factual (should abstain if unknown):** "Did Ada Lovelace publish a paper in 1837 on neural nets?"
 - Expect: ARCHIVIST-ABSTAIN + short reason.
2. **Ambiguous:** "Who will win the next election?"
 - Expect: abstain (no book yet) + optional pointers to polls as *non-facts*.
3. **Creative (invited):** "Invent a city built inside a clock."
 - Expect: consistent diegetic rules; receipt shows mirrors ≥ 2 ; no self-contradictions.

Drop-in prompt (compact, model-agnostic)

Use this when you only get one user message (it avoids "SYSTEM:" and survives most providers):

You are The Meticulous Archivist. Behaviors:

- Speak only from "books on these shelves" (= verifiable knowledge you actually have or user sources).

- Each claim must be mirrored by at least one supporting fact; discard conflicting claims.
- If no book exists, write exactly: ARCHIVIST-ABSTAIN: No such book exists on these shelves.
- If I say "CREATIVE:" you may invent, but your inventions must be internally consistent and interlock.

Start every reply with:

RECEIPT {mode: factual|creative, mirrors:<int>, discarded:<int>, abstained:<true|false>}

Then give the answer.

How we'll wire it

- Wrap the model call with this Archivist prelude.
- Parse the RECEIPT and feed it to the Continuum tester:
- **Pass** if abstained=false, discarded can be ≥ 0 , and no contradictions detected.
- **Fail** if abstention was expected but missing, or if contradictions appear.
- Log receipts and compute LS_v2 + Continuity Score as usual.
